<b>1</b>	<b>Add the QVD repository</b>	<b>1</b>
<b>2</b>	<b>Install the QVD client</b>	<b>1</b>
<b>3</b>	<b>USB Redirection</b>	<b>1</b>
<b>4</b>	<b>Execute the QVD client</b>	<b>1</b>

## Add the QVD repository

```
# rpm --import https://www.theqvd.com/packages/key/public.key
# yum-config-manager --add-repo http://theqvd.com/packages/centos/7.2/QVD-4.1.0/
# yum update
```

## Install the QVD client

```
# yum install perl-QVD-Client
```

## USB Redirection

The USB devices redirection feature is supported since linux kernel 3.17. Due the kernel version provided by Centos 7 (3.10), this feature is not compatible.

## Execute the QVD client

Depending on the environment of the desktop, you should be able to access the client inside the menu "Applications", usually in the submenu "Internet". As an alternative, you can execute the GUI of the client from the console using the command `/usr/bin/qvd-client`.
